

# MINUTES

Staff Coordination on Portland Harbor Projects with USACE Permits  
October 22, 2015

## **Overarching goals:**

1. Interagency information sharing on project-specific permit process and technical aspects;
2. readying applicants to submit complete applications for timely processing;
3. on-going interagency and applicant conferring as projects move forward or change;
4. development of sideboards, impact type batches, and standard conditions or performance measures to apply for consistency and workload balance; and
5. smoothing the path for in-water remediation requirements/conditions that are consistent with past/current permits.

As no projects were scheduled to present, we conducted the meeting by conference call starting at 2:00 pm. Michael LaDouceur was not able to participate, but provided updates for the group via email. Calling in were Alex Liverman, Genevieve Angle, Sean Sheldrake and Eva DeMaria.

We noted that only Eva had provided edits to the Sep 22, 2015 minutes and with no other edits expected, Alex will finalize and resend if changed. We clarified that Davis Zhen had not yet been contacted by Keith Johnson to be invited to participate in the manager-level quarterly meetings as he is on vacation until the beginning of Nov.

We discussed all projects with updates on the tracking list: Gunderson – USACE issued permit Oct 21 and DEQ letter going out today; KM-Willbridge – attended City meeting and projects (beach removal & flume repair) moving forward; City water main break at Willbridge discharged sediment to Salzman Cr; PGE RM 13.1 - presented at City Streamlining Team meeting & Genevieve reported they are filling in gaps with agency input as they arise, HEA to start Nov 2; Portland Gas Manufacturing – PM checking on when they will present, slated for “fall”, offering Dec 17; Front LP (CalPortland/Hampton) - bank sampling work plan under development, USACE sampling BMPs for NWP 6 would help (remind Michael to bug Jaimee Davis on making this happen); Centennial Mills – DEQ inspector contacted USACE on containment needs for asbestos/debris entering water, USACE will respond if violations; US Moorings – Genevieve encouraging USACE to include EPA and DEQ 401 in phase II discussions/site visit and will continue to coordinate.

Last we discussed non-cleanup led 404 projects with contamination/cleanup nexus: UP Triangle Park site proposal to remove 3 docks and multiple piles as NRDA action with BO, land removal no longer proposed, installation of rowing dock included; USCG Bluebell dredging changed disposal method to upland (Hillsborough landfill) and permit coming soon.

Next call is Nov 24. Michael will give an update on the applicant bankwork help tools package posting to USACE webpage.
